

Mockup

A UX Outline of what we want to build today

Gallery View

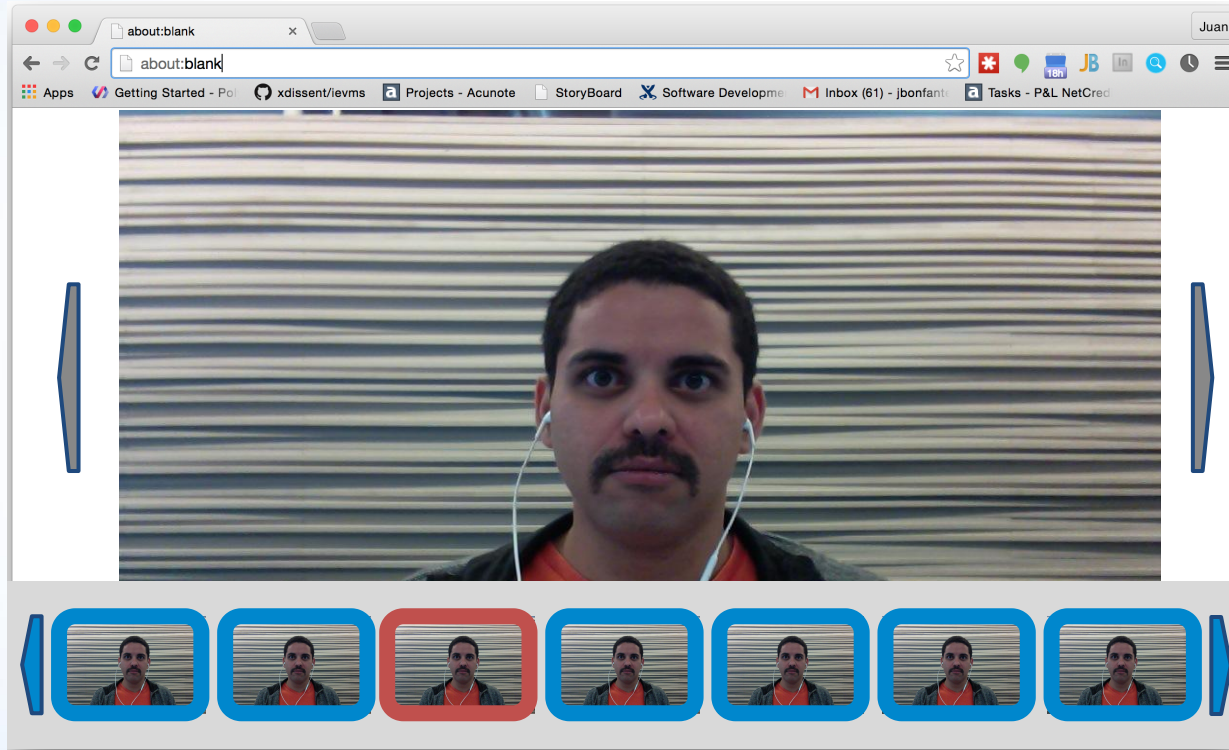

Images are initially laid out in a grid as thumbnails

Each image will get a border, and change border color on hover/mouseover

clicking on an image will expand the image to fill the viewing area (next slide)

Presentation View

Clicked Image expands to fill viewing area

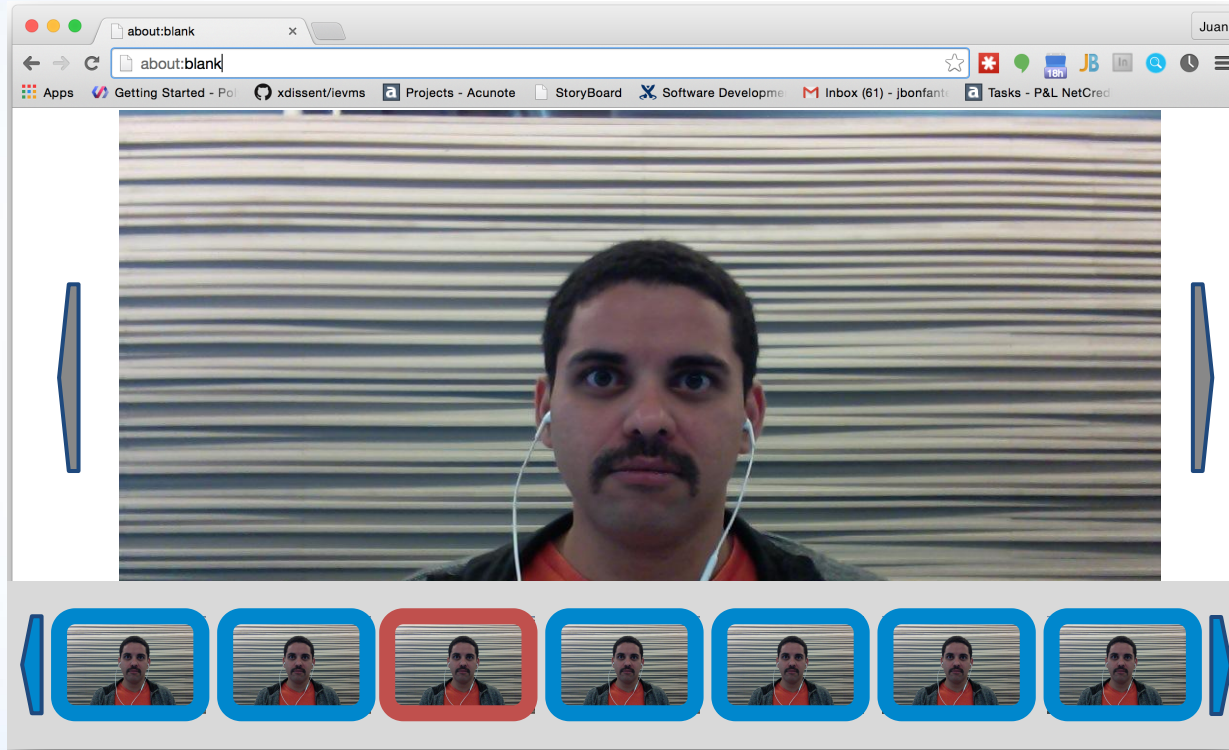

Thumbnail bar appears at the bottom of area. Clicking another image loads it into the viewing area

Image currently being viewed is highlighted in thumbnails

Left and right scrollers for thumbnails, can work either by clicking on them, or hovering over them. Scrolling should stop at beginning or end of image strip

Previous and next button, next to image, centered on page, move the gallery one image forward or back

Extras

Thumbnail bar
hides/disappears if mouse isn't in on top of thumbnail area
(about 15% of the bottom of the screen)

Drop down list, or slider to
select time between slides

Checkbox to turn auto-run
slides on/off (should be off by
default)

Dropdown list which allows
you to select transition to use
between slides

****Extra Credit****

**Make transitions to be specific
for each image in json
(and/or)**

**Allow user to change transition
of each image from thumbnail
bar**
